The Academy has had a very good year in 2017. We are influencing the lives of students and supporting the University in old and new ways.

The Lab Endowment is off and running and support has been great. The Academy has supported student trips to competitions and conferences. These experiences can impact these students forever as well as promote the University at more events. Students were giving encouragement and a needed snack during finals week. This year there was a forum in coordination with the IEEE chapter that allowed students to ask questions and interact with Academy members. Of course, one of the largest activities of the Academy is providing scholarships for deserving students. The Academy awarded nine scholarships, which help students and allowed the university to compete more effectively for the brightest students. The Academy’s Fall 2017 Newsletter will be coming out soon with even more details.

The financial support from the members is crucial to the success of the Academy. The Academy is doing more for the students that ever before. Donations to the Lab Endowment or the Scholarship Endowments leave a lasting legacy. Donations to the scholarships and activities supported by the General Fund can have a great impact today. Because different people have different passions you can direct your donation to specific funds and activities or you can give without designation and the Academy will direct the funds to where they are needed most.

I know there are many places to give and many worthy causes. I am asking you to please join me and the other members of the board of directors in supporting the students, the Department and the University with a gift to the Academy. You can do this by filling out the form below or by donating online at http://ece.mst.edu/department/academy/giving/. Together we really can make a difference.

Have a great holiday season!
